

## **Wild Earth®/ABS Organic Maintenance Application Instructions**

***Next Level Lawns*** utilizes the most effective, naturally occurring plant growth nutrition known to science, formulated with proprietary blended **seaweed** and **humic acid** components, and backed by over 50 years of research.

These products contain naturally balanced chelated trace elements such as boron, molybdenum, copper, zinc, manganese, iron, and cobalt. Some of the natural chelating agents are alginic acid and mannitol.

Research has shown a 30% reduction in required irrigation water for turf when incorporated into a year-round natural maintenance program. Using less water while supporting optimum biology is great for the user and phenomenal for the environment.

### **Directions for First year application:**

**March:** Apply 15 lbs. of Wild Earth®/ABS granular for 1000sq. ft. and 2 ounces of liquid for 1000 sq. ft.

**April to September:** Apply 1 ounce of Wild Earth®/ABS liquid for 1000 sq. ft. every 30 days.

**October:** Apply 10 lbs. of ABS granular for 1000 sq. ft. and 1ounce ABS liquid for 1000 sq. ft.

Soil profiles are examined before starting our maintenance program and every 3 months during the growing season to assure a healthy biology is balanced and thriving.

***The Wild Earth®/ABS product applications are cumulative in their benefits; subsequent annual applications are usually dialed back as sustained plant benefits are evaluated.***
