

Caring for your lawn after Wild Earth® Top Dressing

With a few simple steps your lawn will start to improve almost immediately!

2 – 4 hours after receiving your top dressing application, please run a full irrigation cycle to help get the product down to the soil level, it may take two cycles for this get to the soil level.

Irrigation system: Please make sure your irrigation system is in good "health" too. Irrigation systems should be tested every 3 months. If you notice areas that look dry beside areas that are green you probably have an irrigation head not working properly. If your irrigation system is properly watering your lawn it should be putting down 1/2 to 3/4 inch of water per application. There should also be cross over between the irrigation heads for total coverage of an area.

Running the proper amount of time according to your system manual is critical. Too much is just as bad as too little water being put down on your lawn, proper irrigation will ensure good results.

Mowing: Wait 5 days before mowing, then mow your lawn as usual.

Grass height should be 2 to 3 inches for Empire Zoysia.

St. Augustine is 2 1/2 to 4 inches in shade and 3 to 4 inches in sun.

How long will it take to see results: Within a week to 10 days.

We will be in touch with you in a few weeks to check on your lawn.

Thank you for allowing us to help you achieve a healthy and beautiful lawn!!
